The format is not simple and clean as it can be in the original CDF. While it is a bit harder to find and to create, it is more versatile in its options than CDF and saves to it are more flexible in the way it can be edited. If you are looking for a great save editor for CM3, Cm99/00, Cm00/01 and Cm0102, this save editor will do you well. There are four different modes: Full, Normal, Local, and Custom. So if you are looking to create a save for one of those three games, I would say go for the Full Mode and save in CDF. "Peuchen" Street and "Sofia" Boulevard The "Peuchen" Street and "Sofia" Boulevard () are one-way streets in Saint Petersburg, Russia. They start at the corner of the Moika Embankment and the Nevsky Prospect. They go from the metro station "Sadovaya" to the "Isaevskaya" metro station, then turn into "Stoletnaya" and "Srednekolymkaya", and finally merge in the Nevsky Prospect on the part of the street "Moskovsky Prospect". Their names are in honor of Fyodor Gustavovich Peuchen (1742–1796), an Imperial Russian painter and drawer. Category:Streets in Saint PetersburgQ: Formatted string and latin1_general_cs I have been trying to set up a test to see what happens when I specify a different charset for my output than the database, but so far it is impossible. I have tried this in both phpMyAdmin and in my script. The code I have tried is:

```
mysql_query('SET NAMES latin1_general_cs'); $sql = "SELECT * FROM tbl_user WHERE user_id = 1"; $result =
mysql_query($sql); $row = mysql_fetch_assoc($result); $preg_post_date = substr($row['date_added'],0,4); echo
$preg_post_date; When I do this I get nothing, or nothing is displayed at all. I have also tried:
mysql_set_charset("latin1_general_cs"); $sql = " 82157476af
```
